SFT Standard Information Management Plan

Disclaimer

The Standard information management plan resources consisting of the Standard information management workbooks (Project Information Requirements and Asset Register), appendices, templates and supporting guidance, have been developed by Scottish Futures Trust (SFT) (authors). The workbooks are used to outline the appointing party *(ISO 19650-1) (Client- NEC4)* information requirements at a project level, and to inform the detailed information deliverables for each lead appointed party *(ISO19650-1) (Information Provider – NEC4)* at each project information delivery milestone according to BS EN ISO 19650 parts 1 and 2. The resources are not intended and should not be used as the sole basis for the appointment of lead appointed parties and should be developed in parallel with other appointment documents. SFT have prepared the Standard information management plan as a resource available to Scottish public authorities in procuring the delivery and handover of infrastructure facilities. The resource(s) are issued so as to be consistent with applicable standards and guidance current as at the date of publication.

SFT does not owe any duty of care to users of the Standard information management plan resource(s), and in particular (but without limiting that general exclusion of liability), SFT will not accept any liability arising from any provision, recommendation, template, guidance or action as set out in the Standard information management plan resources, nor for any part of it being incorrect or misleading, either generally or in respect of its application to a given set of circumstances.

STANDARD INFORMATION MANAGEMENT PLAN

Asset Register Workbook

between

[Appointing_Party]

and

[Lead_Appointed_Party]

on

[Project_Name]

The Asset Register workbook defines the client asset information delivery and handover requirements for the new project in the form of data and documentation, and which is required for specific products that will be installed and maintained within the new facility. The Products are categorised and listed in accordance with the Uniclass Classification system (Pr), which is managed and maintained by the NBS.

Master document control (Workbook)

Status Code:	
Date of 1st issue:	XX

(j)

If primary ownership of this workbook changes during the latter stages of design and construction, then the above Project Document Control section should be updated to reflect this. An archive copy should be established prior to any changes. Information Authors may change, or there may be multiple parties contributing to different sections of the workbook over time. All contributors are to ensure they complete the below Project Document Revision table noting the sections updated, and description of changes. The sheets in this workbook are linked so care should be taken to not adjust the structure or add/ delete columns or rows where noted.

ALL > The asset register workbook is broken down into sheets 00-08. The below colour key identifies the purpose

of each sheet and the key parties who will need to review and complete sheet related tasks. Please read these thoroughly to familiarise yourself, making sure you are aware of any sheets requiring input from yourself or your organisation.

NB: A matrix overview of all the workbook sheets and tasks is available for download from the SFT BIM Portal. Take cognisance of the asset information grades and their associated definitions, which is adopted on sheet 04. Sheet colour key for party review and task delivery

Client	Contractor				
All Parties	Client & Contractor				
Sheet name	Sheet purpose				
00: Project Information	Where information relating to the facility is recorded, including master and project document control particulars. A Uniclass product classsification table and a master asset list are also linked in here for workbook use.				
02: Stakeholder Lists	For listing project stakeholders involved in the delivery of asset information such as designers, equipment suppliers, installation companies, operators and maintenance providers.				
03A: O&M manual requirements	For establishing and specifying the op manual information requirements at				
03B:COBie data requirements	For establishing and specifying the Construction, Operations, Building Information Exchange (COBie) asset data requirements at the project outset.				
04: Asset Information Grades	For defining specific information requirements (data and documents), against common asset categories ("Grades") at the project outset.				
05: Product Classification Insert	For importing and quality checking Al <i>classification</i>) code values at key info				
06: Product Responsibility Matrix	Where error-free product (Pr) values register selection, grading and respor	•			
07: AIR Register	The asset information requirements (review the live asset list, the informat the ability to filter down stakeholder deliverables.	ion requirements for asset types and			
08: Maintenance Frequency	Where the final asset list is mapped to maintenance task frequencies to help calendar for the new facility.				

00 Project Information

This sheet is to be completed prior to issuing any content to third parties. It will contain information identifying the facility to which the asset register workbook relates, confirm ownership of the workbook itself and of the information authors who have defined the requirements and populated each respective section of the register. It also confirms the date of issue and subsequent revisions. A Uniclass product classification table and a master asset list are also linked into this sheet for use across the wider workbook.

02 Stakeholder Lists

There are 05 columns in the *Stakeholder Lists* table, with four representing different stakeholder categories and the chronological stages for project information gathering.

The stakeholder lists contain company names only, which need to be maintained and expanded as the project evolves and companies are appointed and sub-contracted. This is important as the lists are used to populate sheet 06 - *Product Responsibility Matrix*, where information delivery responsibilities are assigned against key project stages.

Contractors may wish to include work package references alongside the suppliers and installer company names, (e.g. WP07-SupplierXX) which can then be filtered and grouped on sheet 07 - AIR Register.

03A O&M Manual Requirements

This sheet presents the default digital O&M manual and information handover requirements for the new facility. At the project outset the content should be reviewed by the client and the facilities/ asset management team and refined as required. A client-side information manager can assist in this activity, if appointed. Uniclass Project Management (PM) codes and descriptions have been used to structure and classify the deliverables. (e.g., PM_70_80: Commissioning information - Folders/ containers) (e.g., 70_80_01 : Access control commissioning certificate - document classification)

Additional classification values can be adopted from the Uniclass Project Management table, available from NBS. NB: The Asset Register codes in column E cells, correspond to matching codes in Sheets 04 and 07.

03B COBie data requirements

This sheet is the default Construction, Operations and Building information exchange (COBie) data requirements for the new facility. The Column D 'YES' values for 'Type', 'Component' and 'System' sections correspond with the default requirements set out in Sheet 04.

At the project outset the content should be reviewed by the client and the facilities/ asset management team and refined as required. A client-side information manager can assist in this activity, if appointed. Once complete, the table can be filtered to determine the data deliverables for each stage and parties.

04 Asset Information Grades

This sheet is vital for the accurate specification of the asset information requirements for the project. There are seven asset grades, each representing a common type of asset that typically requires the same information to operate it or maintain it. Default data and documentation requirements are listed against asset grades and stakeholder categories. At the project outset the content should be reviewed by the client and the facilities/ asset management team and refined as required. A client-side information manager can assist in this activity, if appointed.

NB: Data and documentation deliverables are assigned a "Y" if required, "N" if not required, or "TBC" if not known, for each asset grade. The seven asset grades are summarised below.

Grade	Name	Description	Typical Examples
GR01 ->	Critical	Critical to the function and use of the building, or safety of its occupants and users. Damage or operational failure of the asset may result in building evacuation, loss of productivity, or a threat to life. This would typically relate to major plant & equipment, and critical assets central to life-safety systems.	Boilers, Sprinklers, Fire and Smoke Detectors, equipment for safe access and egress etc.
GR02 ->	MEP Specific	A service asset that is not critical as failures will not result in building evacuation or loss of productivity but is a specific asset that may be under a manufacturer guarantee and / or cannot be replaced or maintained without product manufacturer information and performance specifications.	Intelligent devices for non- critical or lifesaving systems. Products included within manufacture specified systems or with specific performance criteria.

	GR03 ->	Fabric Specific	A specific fabric asset that may be under a manufacturer guarantee and / or cannot be replaced or maintained without product manufacturer information and performance specifications.	Manufacturer specified products with specific performance criteria.				
	GR04 ->	GR04 ->ValuedAn asset that is neither critical to building occupation or complex to replace and maintain, but information for future replacement needs to be known. Typically, a high value or specialist asset of significant investment where records relating to specification and replacement costs are desirable.Specialist Equ Equipment, E Consumable						
	GR05 ->	GR05 -> MEP Generic A non-critical and non-specific service asset that can be easily replaced and at low cost. A general fixture that is not dependant on manufacturer or performance specific information to procure, but may still be included as part of a broader planned and preventative maintenance regime.						
	GR06 ->	Fabric Generic	A part of the building fabric that may require records relating to Manufacturer, Location, Cleaning, Construction Inspection & Test, CoSHH etc	Structural elements, fixed partitions/ ceilings with no performance criteria, FF&E, sanitaryware				
	GR07 ->	N/A	No requirement for information.	Pipe, duct, and cable tray segments				
05	Product C	Classificat	ion Insert					
	reviewed and initially adopted by the client at the project outset. Auto-check errors fall under categories: <i>Duplicate, Spelling, Continuity,</i> which are common issues within project models. All reported errors should be resolved by the model originators, and re-checked before the classification data is imported into Sheet 06. Product Responsibility Matrix The Product Responsibility Matrix is used to build the Asset Register. It is the central area where: - all products are confirmed as <i>required, or not required</i> within the project asset register, - asset register grading and respective information requirements are confirmed, - delivery responsibilities are assigned to relevant companies for key information exchange stages. NB: The drop-down list of company names are sourced from the populated sheet 02. Any product classifications imported from sheet 05 and which are part of the SFT master asset database will

08 Maintenance Frequency

The purpose of this sheet is to extend the final asset register list into a schedule of high-level maintenance requirements which can be used by the client / operator to generate a detailed maintenance calendar for the new facility. The Asset list is automatically cross-referenced from Sheet 07 for confirming the relevant Operations Companies, associated maintenance act tasks and their required frequencies. The population of this sheet is a collaborative exercise requiring:

- The Client to confirm the Operations Company or Companies who will manage/ maintain the listed facility assets.

- The Client/ Operators to advise on the Condition Survey and Statutory Compliance requirements for the listed assets.

- The Contractor (through their Suppliers/ Installers) to confirm the manufacturers principle maintenance frequencies for the listed assets. A relevant SFG 20 code can be added, if provided by the Client, or their Operator.

03B: COBie data requirements

[Project_Name]

NB: This sheet is the default Construction, Operations and Building information exchange (COBie) data handover requirements for the new facility. CLIENT > This sheet should be reviewed and refined (as required) at the project outset by the <u>client and the facilities/ asset management team</u>. A client-side Information Manager can

assist in this activity, if appointed. NB: Once compete, Columns D-G can be filtered to determine the data deliverables for each stage and parties. The information exchange points should align with those established in

the SIMP project information requirements workbook. NB: COBie parameter values should align with the National BIM standards-US_V3_4.2, unless noted otherwise in 'comments' column.

		Required	7		- Grev cells indicates no del	iverable for information exch	ange

[Project Name]

	CLIENT > Review the default data (yellow) and documentation (grey) deliverables for each grade (<i>GRxx</i>) and make any necessary project adjustments using the drop down cell function (changes are represented by darker cell colours). You can use the below drop down cell (5/B) to review individual grading definitions, copied from sheet 00. > Save any table changes via the 'Save project changes' button. This will auto update the final sheet 07 AIR Register. > If required, use the 'Load default values' button to reset the table or the 'Restore saved values' button to revert to the last saved table.

06: Product Responsibility Matrix

NB: This table is used to import all error-free product classification values from sheet 05 (Step 1) for asset register selection, grading and responsibility party assignment.

1

i CLIENT > At the project outset complete steps 1-4, up to Col J.

CONTRACTOR > Complete the product party assignments for Cols K, L & M. Steps 1- 4 and a table review should be completed with the client for new products added at the end of RIBA stages 4 and 5. CLIENT & CONTRACTOR > The client can support the product party assignment for Column M.

NB: If there are multiple assignments per classification, please duplicate the classification on sheet 05 and reimport.

08: Asset Maintenance Frequency													
CIRINF Control the Operators Company (in Company) who will manage the Nate Asset. CIRINFs in companisation that accum marginement account mine fracedings using and databasy compliance frequency values for the Nate Asset. CIRINFSC Confirm the name Accument recommended maintenance frequencies for the Nate Asset. A relevent 90 28 code can be added in Calume 1, 4 relarations for the Nate Operator.							A	Annually	м	Monthly	BW	Bi-Weekly	
				Frequency Key >				Bi-Annually	BM	Bi-Monthly	D	Daily	
								Quarterly		Weekly	0	Other	
				Load default Save project Restor		ed la
